Labiaplasty (vulval surgery)

A labiaplasty is surgery to reduce the size of the labia minora – the flaps of skin either side of the vaginal opening.

Some women consider having a labiaplasty because they don't like the look of their labia, or because the labia cause discomfort. This is a major decision you should weigh up.

Help us improve Take part in our survey Yes No thanks

Practice points:

- Not under 18 years old
- Would be considered in public if pain/discomfort
- Risks scarring, altered sensation, dissatisfaction with cosmetic result
- Consider BDS

Questions

'Like' the lichens

Lichen sclerosis

Chronic lymphocyte mediated inflammatory dermatosis

Cause unknown ?autoimmune

Mainly over 50 but can affect any age range

Whitening and atrophy of vulval tissues

Itch or pain predominate

May co-exist with other conditions

Risk of SCC < 5%

Affects Vulva only - not vagina

Figure of 8

Pallor

Atrophy and fusion

Identifying topical eczema medications

Weak For mild conditions	Mild For moderate conditions	Moderate For moderate conditions	Strong For severe conditions
Hydrocortisone 1% or 2% • Cream 	Clobetasol butyrate 0.05% • Cream 	Betamethasone valerate 0.1% • Cream or ointment 	Clobetasol 17-propionate 0.05% • Cream or ointment 
Hydrocortisone 1%, salicylic acid 1%, resorcinol sulphate 0.25% 	Triamcinolone acetonide 0.02% • Cream or ointment 	Methylprednisolone succinate 0.1% • Cream or ointment 	Betamethasone dipropionate 0.05% • Cream or ointment 
Mometasone furoate 0.1%, Hydrocortisone 1% • Cream 	Hydrocortisone 17-butyrate 0.1% • Cream 	Mometasone furoate 0.1% • Cream or ointment 	

VULVAL BIOPSY IF:

1. Suspected neoplastic change
2. Fails to respond to adequate rx
3. Extragenital LS
4. Pigmentation
5. Second line therapy

Daily

Alt days

2 x week

Like the lichens- part 2

Lichen Planus

Inflammatory condition unknown aetiology

? T – cell mediated

Can be classified according to clinical presentation

- Classical – papules on keratinised anogenital skin
- Hypertrophic – perineal/perianal warty plaques (rare)
- **Erosive – most commonly causing vulval symptoms**

Symptoms:

- Itch/irritation
- Soreness
- Dyspareunia
- Urinary symptoms
- Discharge
- Asymptomatic

Appearance

Classical

Wickham's Striae

Hypertrophic

Mucosal surfaces
Often sharp demarcation
Extremely sore
Scarring and vaginal occlusion
Biopsy (only 25% will be classical)
Often co-exists with VLS

Treatment

Basics.....

**Colifoam enema
PV weekly**

Other

Calcineurin inhibitors

tacrolimus

pimecrolimus

Systemic steroids

Methotrexate

Mycophenolate

Surgery

Like the lichens - part 3

Lichen simplex chronicus

Categorised into 4 main groups

Underlying dermatoses eg contact dermatitis, fungal

Systemic conditions causing pruritis – neuropathic, renal failure, PBC

Environmental factors – heat, sweat, rubbing, skincare products

Psychiatric disorders – OCD, anxiety, predispose to itch/scratch cycle

Appearance

- Lichenification
- Excoriation and fissuring
- Hair loss
- Secondary infection

Treatment

Any ideas?

Screen for infection

Biopsy

Refer for patch testing

Check ferritin

Physio

Break itch scratch cycle

Anxiolytic antihistamine at night

CBT

Vulval Intraepithelial neoplasia

Pre-malignant vulval dystrophy

Classified according to underlying aetiology

ISSVD 1986	ISSVD 2004	LAST 2012
VIN 1	Flat condyloma or HPV effect	LSIL
VIN 2	VIN, usual type a.VIN, warty type b.VIN, basaloid type c.VIN, mixed (warty/basaloid) type	HSIL
VIN 3		
Differentiated VIN	VIN, differentiated type	

SYMPTOMS

- Itching
- Burning
- Mass
- Ulcer
- Asymptomatic

VIN

Vulvar intraepithelial neoplasia (VIN)

Raised whitish plaques as a manifestation of VIN.
Courtesy of Christine Holschneider, MD.

Treatment

Why treat VIN?

Progression 10-20%
Symptoms

What are the treatment options?

Excision
Ablation
Topical treatment

What are the possible complications?

Surgical
Cosmetic
psychosexual

What is the recurrence risk

Common
6 monthly follow up 5 years

Remember your embryology?

Embryology

Anogenital epithelium derived from cloaca includes: cervix, vagina, vulva, anus, and lower three centimeters of rectal mucosa up to the dentate line

Table 1: Estimated Percentage of Select Cancers Attributable to Human Papillomavirus

Cancer Site	% Attributable to HPV	% HPV Positive Attributable to HPV-16 & HPV-18
Cervix	100	70
Vagina	40	80
Penis	40	63
Anus	90	92
Oral cavity	25	95
Oropharynx	35	89

Anal cancer rates have quadrupled since the mid 1970s

Let's beat cancer sooner
cruk.org

Vulval Cancers

Cancer type	Features
Squamous cell carcinoma	• Red, pink or white nodule or nodules or plaques • May have a wart-like and/or raw surface if ulcerated • Affected area of vulva may appear white and feel rough • About 50% of women complain of itching or pain • Other symptoms include painful urination, burning, bleeding and discharge not associated with a normal menstrual period
Extramammary Paget disease	• Moist red asymmetrical oozing plaque • May cause burning and itching
Basal cell carcinoma	• Painless red patch, nodule or ulcer
Melanoma	• Appearance of a new pigmented lesion or change in a pre-existing mole
Bartholin's gland cancer	• Persistent cystic or thickened tender mass on either side of the opening to the vagina

Spot the lesion

Vulval biopsy

Its painful!

1% lignocaine +/- topical anaesthetic

3-5mm punch biopsy

PRACTICE POINTS

- Take it from the edge of the lesion
- Not the centre esp if neoplasm suspected or necrotic ulcer
- Beware the excision biopsy!

Case vignettes

Questions

Vulvodynia

Vulvodynia – Vulval pain of at least 3 months duration, without clear identifiable cause, which may have potential associated factors

Vulval pain related to a specific disorder

- Infectious (candidiasis, herpes)
- Inflammatory (lichen planus, lichen sclerosus, dermatitis)
- Neoplastic (VIN, SCC)
- Neurologic (herpes neuralgia, nerve compression)
- Trauma
- Iatrogenic
- Hormonal

Vulvodynia: ISSVD terminology

1. Localised or General

2. Provoked or Spontaneous

NOT: Vestibulitis, Vulvar vestibulitis syndrome, dysaesthesia, vaginismus.

Dysfunctional pain

Trigger: childbirth, infection, dietary, anatomical, psychosocial, genetic

Overlap with other pelvic pain conditions, IBS, fibromyalgia, CFS

Prevalence and demographic characteristics of vulvodynia in a population-based sample

Barbara D. Reed, MD et al 2012 Am J Obstet Gynecol . 2012 February

2269 (89.3%) completed the selfadministered survey

prevalence of vulvodynia was **8.3%**

Prevalence remained stable through age 70, and thereafter declined

208 women meeting vulvodynia criteria,

- 101 (48.6%) had sought treatment
- 3 (1.4%) had been diagnosed with vulvodynia

Previous vulvodynia symptoms had resolved in 384 (16.9%) women after a mean duration of 12.5 years

Represents a significant burden for affected women.....

And for healthcare providers!!

Treatment

Medical

Topical

- Ovestin
- Lignocaine
- Compounded

Oral

- Amitriptylline
- Nortriptylline
- Gabapentin

Surgical

Botox

Vestibulectomy

Complementary

Physiotherapy

Sex therapy

Acupuncture

Dietician

Don't forget the basics!!
Patient information leaflet eg ISSVD

Neuromodulators

Tricyclics commonly used for neuropathic pain

Practice points:

- “Start low and go slow”
- 10mg nortriptyline nocte (less sedating less anticholinergic than amitrip)
- Increase by 10mg weekly to max 50mg
- May take several weeks to notice effect

Foster DC, Kotok MB, Huang LS, Watts A, Oakes D, et al. Oral desipramine and topical lidocaine for vulvodynia: a randomized controlled trial. Obstet Gynecol. 2010 –

- no better than placebo or top LA

Reed BD, Caron AM, Gorenflo DW, Haefner HK. Treatment of vulvodynia with tricyclic antidepressants: efficacy and associated factors. J Low Genit Tract Dis. 2006

- Higher dose amitriptyline 40-60mg produce 50% improvement in both provoked and unprovoked vulvodynia

Practice points:
Pharmac special authority
Less cholinergic effects but may sedate
Can add in TCA if s/e effect limiting dosage

Neuromodulators cont.

Gabapentin – Gamma amino butyric acid analogue

Binds to the $\alpha 2\delta$ subunit of voltage-dependent calcium channels

Halts the formation of new synapses decreasing neuropathic pain

Some evidence for benefit – not robust

Starting dose 300mg nocte and increase to 3000mg daily

- Ben-David B, Friedman, M. Gabapentin therapy for vulvodynia. *Anesth Anal.* 1999
- Harris G, Horowitz B, Borgida A. Evaluation of gabapentin in the treatment of generalized vulvodynia, spontaneous. *J Reprod Med.* 2007

Compounded topical therapies

Novel approach to reduce systemic side effects

Requires compounding pharmacist

2% amitriptyline = 56% response rate

- Pagano R, Wong S. Use of amitriptyline cream in the management of entry dyspareunia due to provoked vestibulodynia. *J Low Genit Tract Dis*. 2012

Topical amitriptyline 2% baclofen 2% cream (ABC) n=32

- Boardman LA, Cooper AS, Blais LR, Raker CA. Topical therapy in the treatment of localized and generalized vulvodynia. *Obstet Gynecol*. 2008

Practice points:

2% amitrip in 2% lignocaine gel BD for 8/52

Cost approx. \$30.00

ABC \$30 for 50g, \$40 for 100g

Others

fluconazole

Vaginal diazepam

SSRI SNRI

tens

Sacral
neuromodulation

Mindfulness

interferon

Steroid injections

NLP

HEALTHPATHWAYS: vulvodynia, lichen sclerosus

RCOG green top guidelines – management of vulval skin disorders

<https://www.rcog.org.uk/en/guidelines-research-services/guidelines/gtg58/>

Case Histories

Take home points

Do examine patients and take a swab – its not always thrush

Use correct terminology for vulval pain

Its OK to start empiric clobetasol if it looks and sounds like lichen sclerosis

Take a biopsy if you need to

Basic genital measures and written information are always helpful
