A New Era for Shingles Prevention in NZ

Sunday 12th June
8:30am-9:25am & 9:35am-10:30am

Herpes Zoster (HZ) affects up to 1 in 3 New Zealanders throughout their lifetime¹ and its long-term complications can have a severe impact on a patient's life. As the risk of HZ and its complications is strongly linked to a decline in cell-mediated immunity either due to age or immune compromise¹, it is important to protect adults 50 years and older from HZ by vaccinating against it.

Join our workshop to learn about patient management through acute and chronic stages of HZ as well as strategies for prevention, focusing on the new recombinant zoster vaccine (RZV).

Agenda

Welcome and Introduction

Presentation

- Introduction to HZ and the significance of protecting patients aged 50+
- Management of acute and chronic pain associated with HZ
- Herpes zoster Ophthalmicus, risk factors and management
- HZ vaccines available in NZ, with a focus on the new recombinant zoster vaccine (RZV), local recommendations.

Panel discussion with Q&A

Speakers

Dr Jenny Visser
GP and Senior Lecturer in Travel Medicine in the Department of Primary Health Care and General Practice, University of Otago, Wellington.

Dr Rachel Niederer
Ophthalmologist, Auckland Eye and Ocular and Medical retina specialist, senior lecturer of the Department of Ophthalmology, UoA.
