

Q10. Do you have any constructive comments regarding the presentation style/content of the speakers?

- All did a good job
- All excellent
- All round extremely high standard
- All visual presentations good. Many spoke too fast cramming to get it all in. I prefer a speaker facing the audience, not the computer or screen. [REDACTED] had interesting things to say, but spoke in monotone and didn't look at the audience and prefaced one topic by saying it was boring which it wasn't.
- Avoid cluttered slides, [REDACTED] -slow down
- Avoid temptation to give too much info in too small time. Simple overheads are better
- better to cover a specific area well than briefly overview a large topic
- Bigger print in Powerpoint slides
- [REDACTED] Great content but please speak slower and to mic
- [REDACTED] monotonous and poor delivery style
- [REDACTED] needs to speak up. [REDACTED] and others face the mic and use mouse as pointer?
- [REDACTED] too softly spoken. Needs to vary voice tone and visually interact with audience more.
- [REDACTED] waffley; appeared to contradict himself sometimes
- [REDACTED] unclear, quiet voice, couldn't hear well. [REDACTED] more GP practice orientated advice, but interesting
- [REDACTED] we were looking for practical points, bullet points and more succinct delivery re [REDACTED]
- [REDACTED] dowdy delivery. [REDACTED] a bit mechanical. [REDACTED] a bit irrelevant for GP.
- [REDACTED] presentations were monotonous and boring
- [REDACTED] talks hard to keep focused on.
- [REDACTED] was hard to follow; mumbled and tried to include too much
- Clearer slides
- Clearer slides
- [REDACTED] good content; too much content too fast
- [REDACTED] packed in too much
- [REDACTED] relevant topic very interesting but tried to cram too much info in 30m ins exhausted and missed stuff
- [REDACTED] these lectures need simplifying for the GP to use in practice.
- [REDACTED] rushed
- [REDACTED] tried to cover too much. [REDACTED] would have liked record of talk as tope or CDROM; really good but would have liked ability to review.
- Do not turn your back to the audience during a presentation
- Don't mumble
- Don't pack everything in; bullet points only. Ensure slides illuminate and don't confuse by their complexity and poor colouring. Remember and use the vast experience in the audience. Don't speak too quickly.
- Get [REDACTED] a chest mike
- Green slides project poorly
- Having a bit of humour in presentation really help especially after a long day.
- [REDACTED] face mic and audience
- [REDACTED] quiet poor speaker, better in small GP
- [REDACTED] was muffled due turning away from mic (as was [REDACTED]) Loved the enthusiasm of top speakers. Would like to have more involvement from [REDACTED] (diving and asthma).
- [REDACTED] and others needed to face audience
- It will be good for presenters to concentrate on diagnosis, treatment and when to refer rather than talking about secondary care experience
- Keep font large on slides for those in back of theatre
- Keep it relevant. [REDACTED] talk too much virology and too little practical advice.
- Keep it up.
- Keep relevant to GP
- Keep up the great work
- Less info on the slides some were too cluttered
- Many speakers speak away from the mic and towards the screen

- more content for drug abuse
- Most slides could not be read by audience due to small print. Some specialists () told us how he managed allergies, but I needed guidance on how I should manage and IR allergies
- Need lapel mics if going turn to screen
- Need to face audience and speak into mic
- No all good
- No excellent
- Not stand with backs to audience
- Obesity workshop felt like a rehash of the lecture. Some slides not interactive adult learning it could have been way better as an excellent lecture given earlier
- Overall excellent. delivery style a ??? Yawn
- excellent information content, but no fluctuation and punctuation needs more energy in presentation to keep awake
- monotone voice sleep inducing try to introduce clarity into presentation. talking around the slides rather than just reading them (talking to audience) much more engaging
- has a low volume voice, needs louder volume mic
- Remember to speak clearly
- Several lean on the lectern facing the screen away from the mike so very hard to hear properly
- Several of the speakers just read out their slides
- Slides that are not too complex. Simple messages
- Some are hurried. Making a CD about the presentations
- Some had too much info on overheads. Barely enough time to read the slide let alone hear what they were saying as well.
- Some overheads too busy/difficult to read. Need to pay attention to contrasting print to background
- Some slide shows were difficult to see (too much info, jokes too small)
- Some spoke too fast and too much technical info. Some gabbled.
- Some were difficult to hear
- Speak clearly. Enunciate key points. Don't assume we already know the topic.
- Speak into the mic. Face the audience. Less information; some slides were very difficult to make out.
- excellent in workshop, a bit dry in lectures
- The session was boring and non-practical. Could have a much more practical perspective on the subject
- Too much information on some slides
- Try to be more relevant to GP less statistics.
- Try to speak more directly to the audience and into the mic
- Varied style of presentation throughout to maintain attention.
- Very good speakers, interactive workshops
- was dissapointed that a few presenters merely read their powerpoint slides
- We want bullet/take home points. Nuts and bolts on how to do it. What to do. (was fabulous) shorter slides and less waffle. talk very disappointing
- Workshops with too much audience participation often not helpful
